

# DETAILED MDTC PROJECT STATEMENT

## **Problem Statement:**

Most of the developers don't get teams to participate in Hackathons on time and with qualifications they want. So we will create a website where user can register and get the nearest developer using the map API.

## **Technologies Used:**

PHP, MySQL, HTML, CSS, AngularJs and can be varied according to the mentees choice

## **Approach to implement Project:**

- Create database to store the details of users who register on website for login purposes.
- Create the website
- Implement Map API for using location of user's location.

## **Timeline/Modular Segmentation for your project:**

8th Dec - Idea discussion and Clarification

9th - Familiarizing with HERE API

10th - 13th Dec - Front-end + DB + Integration

14th Dec onwards – Final Touch to the project
